THREE LEVEL TABLE OF CONTENTS
supporting “Processes in Biological Vision”
© 2000 James T. Fulton, author
www.neuronresearch.net

This abbreviated TABLE OF CONTENTS is a guide to the full work. A five level TABLE OF CONTENTS, an INDEX, and a LIST OF FIGURES will be found at the end of each Chapter.

The work is divided into five major PARTS as indicated below. There is an introductory text associated with each PART.

SYNOPSIS

Part A Environment and Physiology of Vision

1 Introduction, Phylogeny & Generic Forms

1.1 Introduction	1
1.1.1 The order of exposition in this work	3
1.1.2 Terminology	4
1.2 Animal phylogenics with vision as a fundamental parameter	7
1.2.1 Animal evolution categorized by visual configuration	7
1.2.2 Correlating genetic and phylogenetic data	36
1.2.6 Summary	38
1.2.7 Correlating morphological names and phylogenetic data	39
1.3 A survey of the state of the art in vision	40
1.3.1 Some Simple Reality Checks	40
1.3.2 Survey of the Literature	42
1.3.3 Interpreting chrominance information and measured signal waveforms	47
1.3.4 Necessity of scientific rigor when conceiving an experiment	50
1.3.5 Need for careful experimental design and implementation	56
1.3.6 Experiment Reporting	60
1.4 Perspective	60
1.4.1 The role of an Epicurean	62
1.4.2 Modeling Philosophy	63
1.4.3 Tests of a good Model and/or Theory	63
1.4.4 Modeling Scope	64
1.4.5 Models prevalent in the neurology literature	64
1.4.6 Necessity of employing non-linear techniques	66
1.4.7 The fundamental concepts of the visual and neural systems	66
1.5 Focus of this Work	69
1.5.1 This Theory	70
1.5.2 This Model	73
1.5.3 This Presentation	92
1.6 New Descriptors of vision based on this work	98
1.6.1 The fundamental equations of vision	98
1.6.2 The Spectral absorption of the chromophores	101
1.6.3 The Unified Luminance Function	102
1.6.4 The New Chromaticity Diagram	105
1.6.5 A new theoretical wavelength discrimination function	105
1.6.6 A new theoretical dark adaptation characteristic	106
1.6.7 The Standard Human Eye of research (& associated parameters)	106
1.7 Generic visual subsystems based on morphology	108
1.7.1 Generic Optical (Visual) Systems	110
1.7.2 Generic Retinal Systems	130
1.7.3 Generic motor System	142
1.7.4 Generic neuron, the mechanisms and operation of	145
1.7.5 Generic Neuron Signaling System	148
1.7.6 Generic brain	157
1.8 Summary of major findings	162

2. Environment, Coordinate Reference System and First Order Operation	2
2.1 Physical Environment	2
2.1.1 The Radiation Environment	3
2.1.2 The scene environment	15
2.1.3 The thermo-mechanical environment	16
2.1.4 The hydraulic environment	17
2.2 The retinotopic coordinate systems of vision, Map of the Retina	17
2.2.1 Coordinates external to the eye	18
2.2.2 Coordinates internal to the eye	22
2.2.3 Coordinates relative to perception	29
2.2.4 Other parameters related to embryology and morphology of the eye	30
2.3 The organization and mixed coordinate systems of the chordate brain	30
2.3.1 The general organization of the brain	30
2.3.2 Coordinate transformations within the visual system	36
2.3.3 Initial embryology of the brain	36
2.3.4 The connections between elements of the brain	39
2.3.5 Ultimate morphological and topological organization of the brain	41
2.3.6 The morphological environment of the cerebral cortex	45
2.4 The Visual Optical System	47
2.4.1 Overview	47
2.4.2 The Physiological Optical System	58
2.4.3 Auxiliary Optical Techniques Used in Specific Visual Systems	65
2.4.4 The Field Lens and Image Plane of the Optical System	68
2.4.5 Summary of the Optical System up to the Petzval Surface	70
2.4.6 The Optical System Beyond the Petzval Surface	71
2.4.7 Summary of the Overall Optical System	75
2.4.8 Ophthalmological models of the visual system	77
2.5 Motion, and fixation in the operation of the eye	85
2.5.1 Overview	85
2.5.2 Muscles and motions in <i>Chordata</i>	85
2.5.3 Adaptation of ocular motion	88
2.5.4 Coordination of ocular motion	89
2.5.5 Sensitivity suppression during eye movements	90
2.6 The Temporal Input Environment of the eye	90
2.6.1 The natural environment	90
2.6.2 The man-made visual environment	91
2.7 The unique environment of the photoreceptor cells	91
2.7.1 Overview	91
2.8 The Signal Environment of the visual system	95
2.8.1 The Major Signal Pathways of the Visual System	95
2.8.2 The building blocks of the neural system	111
2.8.3 The Characteristics of visual signals	111
2.8.4 The form of Horizontal and Amercine cells	115
2.8.5 The electrical environment of the neural system	116
2.9 Summary	118
3 Description of the Retina	1
3.1 Introduction	1
3.1.1 Background	2
3.1.2 A framework for discussion of the chordate retina	6
3.1.3 Additional concerns in experiment design	12
3.1.4 Matters specific to the organizational structure of the chordate retina	13
3.1.5 Matters of photoreceptor cell classification	15
3.2 Morphology of the chordate retina	21
3.2.1 Anatomical Level	23
3.2.2 Histological Level	31
3.2.3 Molecular level (of Outer Segments)	51
3.2.4 Electronic architectural level	55
3.3 Metabolism of the chordate retina	56
3.3.1 Static considerations related to a cell	56
3.3.2 The vascular supply to the retina	58
3.3.3 Dynamic considerations	61
3.4 Functions of the Retina	65
3.4.1 Functional levels	66

3.4.2 The center-surround phenomenon (<i>temporary home</i>)	71
4. The Photo-Receptor/IPM/RPE complex of the Chordate Eye	2
4.1 Introduction	2
4.1.1 A roadmap of the photoreceptor/IPM/RPE complex	5
4.1.2 Terminology	6
4.1.3 Additional glossary entries	25
4.2 Typical Morphology of a Photoreceptor (using light microscopy)	26
4.2.1 Chordata photoreceptors versus those of Arthropoda and Mollusca	27
4.2.2 Typical photoreceptor of <i>Chordata</i>	29
4.2.3 Other cells in the photoreceptor laminate	34
4.3 Histology of a Photoreceptor (Introducing electron microscopy)	35
4.3.1 Recent morphology based, chronology of the view of a photoreceptor cell	35
4.3.2 Proposed internal organization of the photoreceptor cell	38
4.3.3 The Structure of the Gland Portion of the Cell	43
4.3.4 Gross structure of the outer segment	48
4.3.5 Detailed structure of the outer segment	54
4.3.6 The cytology of the neural portion of the photoreceptor cell	72
4.3.7 Environment surrounding the cell	81
4xx.4.3 Correlation of old names with actual functions (see 4.xx at end)	82
4.4 Functional Description of components at the cytological level and beyond	84
4.4.1 Outer segment	84
4.4.2 Inner segment	86
4.5 The Photoreceptor-IPM-RPE Complex	86
4.5.1 The morphogenesis of the photoreceptor-IPM-RPE complex	90
4.5.2 The character and content of the Inter Photoreceptor Matrix	91
4.5.3 The character and content of the RPE layer	92
4.5.1 The Inner segment(EMPTY)	93
4.6 Development & Life Cycle of Photo-Receptors (Physical dynamics)	93
4.6.1 Overview	94
4.6.2 Overall dynamics of the photoreceptor material processing loop	100
4.6.3 Normal operation of the photoreceptors--metabolism & growth	104
4.6.4 Long term chemical dynamics associated with the photoreceptors	130
4.6.5 Proposed Experiments	139
4.7 Operation of the photoreceptor in signaling (Electrical dynamics)	140
4.7.1 Terminology and fundamentals	141
4.7.2 Transduction	142
4.7.3 Translation and initial amplification	144
4.7.4 The power supplies	149
4.7.5 Transmission from the distribution Activa to the pedicel	151
4.7.6 The output transfer network	151
4.7.7 The combined transducer/translator circuit	152
4.8 Variations in photoreceptors	155
4.8.1 Variations related to color vision	155
4.8.2 Variations related to routine growth	156
4.8.3 Variations related to retinal position	156
4.8.4 Other classifiable variations in photoreceptors	156
4.9 Operation of the photoreceptors in the local environment	156
4.9.1 Pathological conditions	156
4.9.2 Experimental techniques	157

PART B Bioelectrochemistry of the Photoreceptor

5 The Photochemistry of Animal Vision	1
5.1 Introduction	1
CHAPTER SYNOPSIS	1
5.1.1 The conventional wisdom of the vision community	2
5.1.2 The definition of photochemistry	4
5.1.3 Redefining the baseline of photodetection in vision	5
5.1.4 Chemical Analogs to Vision Chemistry	6
5.2 Glossary	8
5.2.1 Terms specific to the liquid crystalline state of matter	9
5.2.2 Terms specific to Spectral absorption	9
5.2.3 Terms specific to pharmacology and retinoid transport	10

5.3 Terminology	11
5.3.1 States of Matter	11
5.3.2 The concepts of resonance important to vision	14
5.3.3 Nomenclature in photon-chemical interactions and the retinoids	16
5.3.4 Quantum mechanics & spectral plots	20
5.3.5 Spectral and Cumulative Absorption Measurements	23
5.4 The Absorption Characteristics of Materials	33
5.4.1 The Energy Level Diagram	33
5.4.2 The Energy Band Diagram	35
5.4.3 Absorption Bands of a Molecular System(s)	37
5.4.4 Transitions in complex molecules	41
5.4.5 Absorption coefficient profiles	41
5.4.6 Absorption as a function of environment	44
5.4.7 Absorption by a disk of an outer segment	48
5.5 Candidate Chromophores	48
5.5.1 Organization of the retinoid family	49
5.5.2 The retinene family as a precursor of the Rhodonines™	50
5.5.3 Concepts of a liquid crystal	55
5.5.4 The (extended) Retinoid family viewed as a liquid crystal	57
5.5.5 Minimal Requirements for an effective Chromophore	59
5.5.6 Modification of a retinoid to become a chromophore—a Rhodonine	61
5.5.7 Predicted chromophores derived from natural retinoids	63
5.5.8 Stereo Chemistry of effective chromophores—leading to the Rhodonines	66
5.5.9 Electronic structure and absorption in effective chromophores	69
5.5.10 Spectral Characteristics of the Rhodonine family of chromophores	73
5.5.11 The anisotropic absorption of the disks of humans and other chordates	114
5.5.12 The Rhodonines as retinoids	117
5.5.13 The Rhodonines as indicators	125
5.5.14 Laboratory fabrication of the Rhodonines	125
5.5.15 Extraction, Separation and Chemical Analysis of the Rhodonines	134
5.6 Physical configuration of the chromophores	136
5.6.1 Adsorption versus reaction between the chromophores and opsin	136
5.7 The use of templates	138
6 Static Test Data Pertinent to Vision Research	1
6.1 Introduction	1
6.1.1 Fundamental overview of the visual process	1
6.1.2 Historical perspective	2
6.1.3 The Experimental design environment	3
6.1.4 Initial evaluation of the data base	4
6.1.5 The top level flow diagram of the retinoid chemistry of vision	6
6.2 The Carbon chemistry of vision	8
6.2.1 The retinenes as hormones, the Vitamin A family	9
6.2.2 The retinenes as chemicals	10
6.2.3 The retinenes and retinene complexes as chromophores	21
6.2.4 A family of retinines, the Rhodonines	23
6.3 Spectral absorption data related to the retinoids	23
6.3.1 Data from non-biological sources of the retinenes in dilute solution	23
6.3.2 Data from non-biological sources of the retinenes in concentrated solution	25
6.3.3 Data from biological sources of retinenes in dilute solution	25
6.4 Non-spectral data for the retinoids	30
6.4.1 Non-spectral data from non-biological sources of retinoids	30
6.4.2 Non-spectral data from biological sources of retinoids	48
6.5 Extraction, separation and identification of the chromophores from biological sources	48
6.5.1 Historical extraction, separation and identification of the chromophores	48
6.5.2 Proposed extraction, separation and identification of the chromophores EMPTY	49
6.X Precise comparisons between predicted and measured spectra	49
7 Dynamics of Vision	1
7.1 Characteristics & Dynamics of Retinoids in the body	1
7.1.1 Introduction	1
7.1.2 Transport Scenario for the retinoids	7
7.2 Dynamics of radiation-chemistry and the photoreceptor cell	24

7.2.1	Radiation Chemistry	27
7.2.2	Excitation of a Liquid Crystal	27
7.2.3	De-excitation of a Liquid Crystal	27
7.2.4	Dynamics of excitation	28
7.2.5	The dynamics of transduction to a current	35
7.2.6	Analysis of the excitation equation	39
7.3	Dynamics of the physiological optics of vision	47
7.3.1	Background	47
7.3.2	Terminology	59
7.3.3	The physiology of the pointing subsystem	72
7.3.4	Modeling the dynamics of the pointing system	83
7.3.5	Measured open and closed loop performance of the oculomotor system	94
7.3.6	Measured Performance of the augmented oculomotor system	99
7.3.7	Definition and measurement of tremor	102
7.4	Operational overlays on the Precision Optical System	106
7.4.1	Framework for evaluating the operational overlays	108
7.4.2	The version control subsystem	133
7.4.3	The vergence control subsystem	134
7.4.4	The mechanism of Stereopsis EDIT	152
7.4.5	Fusion and Depth Perception as phenomena	168
7.4.6	Evaluating stereopsis through fusion and depth perception	181
7.4.6	Overall temporal response & latencies	186
7.4.6.1	Definition and tabulation of latencies	186
7.4.7	The lens and aperture control subsystems	197
7.4.8	Interplay of version, vergence and accommodation subsystems	213
7.4.9	Other models of version, vergence and accommodation in the literature	214
7.5	Higher level functional aspects of the dynamics of the eyes	216
7.5.1	Background	217
7.5.2	Aspects of examining a scene	219
7.5.3	Oculomotor aspects of reading	226
7.6	Mechanical dynamics of the PC/RPE interface	232
7.6.1	Description of the interface	232
7.6.2	Summary of the dynamics	237
7.6.3	The visual cycle of the Rhodoinines	237
7.7	The hydraulic, metabolic and electrical dynamics of the electrostenolytic system	238
7.7.1	Electrical power requirements of the neural system	238
7.7.2	Use of Glutamic acid in neural respiration, specifically electrostenolysis	239
7.7.3	The sources of glutamic acid	250
7.7.4	Pharmacological impact of the glutamate family on the neural system	254
7.7.5	Tracking respiration related to the neural system	258

PART C. ELECTROLYTIC CHEMISTRY & ELECTROPHYSIOLOGY OF THE NEURON

8	The Basic Configuration of the Neuron	1
8.1	Introduction	1
8.1.1	Historical problems in neuroscience	4
8.1.2	Archaic notions found in current neuroscience literature	15
8.1.3	The Electrolytic Theory of the Neuron	21
8.1.4	The plan of presentation	30
8.1.5	Preview--Functional framework of the neural system	33
8.1.6	Glossary	38
8.2	The physical chemistry of biological membranes	43
8.2.1	The environment of the neuron	47
8.2.2	Background of Electrolysis and the electronics of electrolytic chemistry	53
8.2.3	Characterizing the electrolytic environment of a biological membrane	65
8.2.4	Extended descriptions of neural membrane regions	80
8.3	The detailed electronic characteristics of a <u>type 2</u> membrane	90
8.3.1	The unique quantum-mechanical characteristics of a membrane	91
8.3.2	The characteristics of an isolated biological membrane	91
8.3.3	Combining the type 2 membrane with electrostenolysis-- <i>powering the neural system</i>	102

8.3.4	Conclusions to be drawn concerning a biological membrane before proceeding	106
8.4	The electrical characteristics of the static neuron	109
8.4.1	The fundamental cell membrane	110
8.4.2	Development of the functional structure of the neuron	113
8.4.3	TRANSITION FROM AN AXON-ONLY TO A JUNCTIONAL-TISSUE MODEL	120
8.4.4	Defining the static conexus found within and between neurons	123
8.4.4	Equivalent circuits of the differentiated conduits of the static neuron MOVE to Chap 10	128
8.5	Characteristics of the dynamic neuron	134
8.5.1	The phenomenology of a <i>second order</i> neuron with “Transistor action”	134
8.5.2	The intrinsic properties of the Activa	137
8.5.3	The electrical characteristics of a <i>second order</i> neuron with “ <i>Transistor Action</i> ”	140
8.5.4	Operation of a <i>second order</i> neuron with “ <i>Transistor Action</i> ” w & w/o feedback	144
8.5.5	TRANSITION FROM A DUAL-ALKALI TO AN ELECTRON-BASED MODEL	149
8.5.6	Changes in perspective relative to the equivalent circuits of neurons	150
8.5.7	Emulation and simulation of Activa and Activa circuits	151
8.6	The electrostenolytic process powering the neurons REORDER	153
8.6.1	Electrical power requirements of the neural system	154
8.6.2	Use of Glutamic acid in neural respiration, specifically electrostenolysis	156
8.6.3	The sources of glutamic acid	174
8.6.4	Pharmacological impact of the glutamate family on the neural system	179
8.8	CHAPTER SUMMARY	189
9.	More Complex Neurons	1
9.1	Introduction	2
9.1.1	Categorization of neurons by function	2
9.2	The electrotonic, or analog, neurons	5
9.2.1	Bipolar Cells	5
9.2.2	The lateral and interplexiform Cells	8
9.2.3	The Photoreceptor neuron	16
9.2.4	Typical changes in signal amplitude among analog neurons	20
9.3	The pulse and hybrid signaling neurons	20
9.3.Axxx	The Action Potential vs pseudo action potentials	21
9.3.1	The electrical characteristics of pulse regenerator neurons	28
9.3.2	The signal regeneration neurons (and Nodes of Ranvier)	29
9.3.3	The cytology of a neuron containing a chain of Activas	31
9.3.5	The ganglion neuron of the retina, mid-brain & cortex	34
9.3.6	The special case of the eccentric cell of Limulus	39
9.3.7	The stellate neuron of the mid-brain and cortex	39
9.4	The coupling between neurons—the SYNAPSE RE-EDIT	42
8.6.1	The SYNAPSE, an active electronic device at a deceptive location EDIT	42
9.4.1	Aspects concerning the electrolytic vs chemical neurotransmitter	45
9.4.2	The detailed configuration of the synapse	50
9.4.3	The detailed morphology of the synapse	51
9.4.4	The synapse as a diode	51
9.4.5	The synapse as an impedance	51
9.5	Other important features	52
9.5.1	Merging and bifurcating signal paths	52
9.5.2	Relationship of nuclei to conduits and sheaths	52
9.5.3	Biasing and the non-uniformity of axoplasm potential	53
9.6	Parametric values of Biological transistors	53
9.6.1	The AT type low noise Activa--used in the photoreceptor cell	55
9.6.2	The AD type distribution amplifier Activa--in the photoreceptor cell	56
9.6.3	The AB type buffer amplifier Activa--in the bipolar cell	56
9.6.4	The AL type signal processing Activa--in lateral cells	57
9.6.5	The AG type switching Activa--in ganglion cells	58
9.6.6	The AN type repeater--in Nodes of Ranvier of Ganglion Cells	59
9.6.7	The BS type isolation amplifier	60
9.6.8	The AR type signal recovery amplifier	60
9.6.9	The AM type muscle control amplifier	60
10	The Morphology & Electrophysiology of the Neuron	1
10.1	Introduction—A fundamental change in the baseline of Neuroscience	1
10.1.1	A fundamental change in the baseline	1
10.1.2	Understanding the perspective of this work versus the general literature	9

10.1.3	A new formal underpinning for studies in bioelectrochemistry	19
10.1.4	General technical background & terminology in analytical imaging	34
10.1.5	Fundamental morphology of the neural system	52
10.1.6	Glossary	76
10.2	External and surface topography of neurons	83
10.2.1	Background	84
10.2.2	Exterior morphological-scale features related to the neurites	89
10.2.3	Exterior morphological scale features of the axon	90
10.2.4	Exterior cytological-scale features of neural tissue	92
10.2.5	Exterior electrical features of neural tissue	98
10.3	Reformulating the concept of signal transmission in neuroscience	99
10.3.1	General Background	100
10.3.2	Technical background related to the action potential	110
10.3.3	Mathematics of signal conduction and propagation in neural circuits	124
XXX	Efficient merging of conduction and propagation in stage 3 circuits	ELIMINATE 124
10.3.4	Transmission by <u>conduction</u> of <u>electrotonic</u> signals within Stage 1,2 & 4 neurons	139
10.3.5	Transmission by <u>propagation</u> of <u>phasic</u> signals within Stage 3 neurons	EDIT WHOLE SECT 144
10.3.7	Computational anatomy as a flexible tool in the neural system	163
10.3.8	Correlation of the transmission theory of axons with the measured data	174
10.3.9	The time delays relevant to the neural system	191
10.3.10	The complex electrical structure of the ramified neurites	193
10.4	A functional pyramid cell as an exemplar of a <i>type 1</i> (electrotonic) conexus	195
10.4.1	Interior features of the neuron	REARRANGE within 10.4 195
10.4.2	The Activa within a pyramid cell as an exemplar	?TOO GENERAL FOR HERE 201
10.4.3	A redefinition of the synapses with a neuron containing a type 1 conexus	206
10.4.4	The horizontal and amercine cells as analogs of the pyramid cell	EMPTY 207
10.5	A functional Node of Ranvier as an exemplar of a <i>type 2</i> (phasic) conexus	207
10.5.1	Precise definition of the nodal region	207
10.5.2	Geometry of the Node of Ranvier	212
10.5.3	Merging morphology and electrolytic topology	224
10.5.4	Description of a node and an axon segment as a functional unit	236
10.5.5	The <i>axon segment</i> (internode) as both axon and dendrite	240
10.6	Two functional varieties of the hybrid ganglion cell, and the stellate cell of stage 3	243
10.6.1	The morphology and electrophysiology of the parasol ganglion cell	EMPTY 243
10.6.2	The morphology and electrophysiology of the midget ganglion cell	EMPTY 243
10.6.3	The input structure of a typical signal differencing neuron	243
10.6.4	The morphology and electrophysiology of the stellate cell	EMPTY 244
10.6.5	Signal propagation over the Node of Ranvier and an axon segment as a unit	EMPTY 244
10.7	The synapse as the electrolytic connection, a <i>type 3</i> conexus, between neurons	EDIT 244
10.7.1	The <i>style 1</i> synapse typical of stage 3 connections	EMPTY 247
10.7.2	The <i>style 2</i> synapse typical of stages 1, 2 & 4 connections	EMPTY 247
10.7.3	The reported <i>style 3</i> synapse	EMPTY 252
10.7.4	The “giant synapse” of squid as a hybrid style synapse	252

CHAPTER 10 PART 2

10.8	The electrophysiological performance of the neural system	1
10.8.1	Overview of configurations common to the neural system	4
10.8.10	The time delays relevant to the neural system	19
10.8.2	The analyses of individual neural circuits	21
10.8.5	Measurements related to electrotonic neurons, stages 1,2 & 4	51
10.8.6	Measurements related to regenerative projection neurons, stage 3B	61
10.8.7	Measurements related to hybrid neurons, stage 3A & 3C	88
10.8.8	Measurements related to operational synapses	105
10.8.9	Measurements in more complex situations	105
10.8.11	Typical delays and computed signal velocities between selected points	CONSOLIDATE 122
10.9	Brief remarks on pathology and pharmacology of neurons	122
10.9.1	Characteristics of the electrolytes	123
10.9.2	Importance of characterizing the external and internal media	126
10.9.3	Pathological problems	127
10.9.4	Effects of pharmacology on performance	127

PART D DETAILED DESCRIPTION OF THE OVERALL VISUAL PROCESS

11	Introduction to modeling of biological phenomena	1
11.1	Background	1
11.1.1	Clarification of concepts	1
11.1.2	Terminology and conventions	17
11.1.3	Architecture of the neural system	38
11.1.4	A coordinated morphological notation for the neurons	47
11.1.5	Notation of principal waveforms of electrophysiology	48
11.1.6	Graphical presentations	62
11.2	Description of the circuits of visual signal processing	66
11.2.1	Nature of the active devices within a neuron	68
11.2.2	Neurophysiological-reductionistic models	69
11.3	Baseline electrical analogs for vision	69
11.4	Top level power distribution/consumption	73
11.5	Principle Signal Sources	76
11.6	Functional and tabular models of vision	76
11.6.1	Background	76
11.6.2	The Global Model	77
11.6.3	The Functional Block Diagram	81
11.6.4	The Top Level Schematic	89
11.7	Circuit diagrams of vision	94
11.7.1	Background	95
11.7.2	Large signal circuit diagrams	96
11.7.3	Medium signal circuit diagrams	107
11.7.4	Small signal circuit diagrams	109
11.8	Comparison with other models	112
11.8.1	Morphological descriptions	113
11.8.2	Sub-stages of the Overall Block Diagram	115
11.8.3	Other overall block diagrams	116
11.8.4	Other circuit diagrams	118
11.8.5	Other conceptual descriptions	119
12	Primary Signal Processing--Signal Detection	1
12.1	Introduction	1
12.1.1	Background	2
12.1.2	Definition of the cytological situation	4
12.1.3	Derivation of the Circuit Analog	5
12.2	Mechanism of the photodetection process	6
12.2.1	Electronic Characteristics of the Chromophores	6
12.3	Mechanism of the amplification process	9
12.5	The Complete Photo Detection Process	9
12.5.1	The Transduction Block	13
12.5.2	The Translation Block	13
12.5.3	The amplification block	15
12.5.4	Individual response functions	16
12.5.5	Assembly of the overall circuit	17
12.5.6	Candidate biological circuit	19
12.5.7	Effect of dis-assembly in the laboratory	22
12.6	The special case of the long wavelength visual channel(s)	23
12.6.1	The Large Signal Model	29
12.6.2	The Small Signal Model	30
12.7	The Transfer Functions of Stage 1	30
12.7.1	The steady state transfer function	30
12.7.2	The transient state transfer function	30
12.7.3	The "Overdriven" transient state transfer function	30
12.7A	The special case of the suction pipette technique	30
12.8	Comparison with the Literature	31
12.8.1	Polarity of the photoreceptor output	31
12.8.2	Dynamics of photoreceptor cells	43
12.9	Summary	43

13 Secondary Signal Processing--Signal Manipulation	1
13.1 Chapter preview and approach	3
13.1.1 Chapter Preview	3
13.1.2 Chapter approach	4
13.1.3 Background information	6
13.2 Classification of physical signal paths	13
13.2.1 Principle signal paths	13
13.2.2 The "straight-through" path	15
13.2.3 Divergent Paths	15
13.2.4 Convergent Paths	15
13.2.5 Feedback Paths	15
13.2.6 Phantom paths	15
13.2.7 Discussion	16
13.3 The foveola signal path	16
13.3.1 Photoreceptor cell output	17
13.3.2 Bipolar cell output	20
13.3.3 Signal matrixing cell outputs	20
13.3.4 Ganglion cell output	21
13.4 The "straight through" model (without temporal modulation)	21
13.4.1 The Photoreceptor Cell	24
13.4.2 General Circuit Characteristics	27
13.4.3 The Bipolar Cell	29
13.4.4 The Gap Junctions	29
13.4.5 The Ganglion Cell and its subdivisions	30
13.4.6 The Photo-piezo transducer	31
13.4.7 Overall signal performance of the "straight through" path	33
13.4.8 Test data to be expected from the "straight through" path	40
13.5 The first "Lateral" signal paths	42
13.5.1 The Chromatic signal path	47
13.5.2 The detailed chromatic model	48
13.5.3 The complete chromatic response	52
13.6 The Second Lateral signal path	58
13.7 The temporal aspects of these signal paths	58
13.7.1 Basic architecture	60
13.7.2 Summary of reported results	60
13.7.3 Consequences to the laboratory investigator	60
13.8 Abbreviated Pathways	60
13.9 EMPTY	61
13.10 Summary	61
13.11 Pharmacology	64
14 Tertiary Processing--Signal Encoding, Transmission & Decoding	1
14.0 Introduction	1
14.1 Architectural coding	4
14.1.1 Field mapping	4
14.1.2 Signal coding	7
14.1.3 Coding theory	8
14.2 Functional Encoding	8
14.2.2 Encoding	9
14.2.3 Transmission	9
14.2.4 Motions of the eye	9
14.2.5 Decoding	10
14.2.6 Form of the decoded information	11
14.3 Spatial encoding (relative to the retina)	13
14.3.X The architecture of spatial encoding	13
14.4 Summary	14
14.4.1 Form of the signals presented to the brain	14
14.4.2 Analogies with color television	14
14.4.3 Analogies with digital television	15
15 Higher Level Perception	2
15.1 Introduction	2

15.1.1	Brief overview	5
15.1.2	Background	12
15.1.3	Terminology & Coordinates	28
15.1.4	Glossary	37
15.1.5	Coordinates of the old brain in human	40
15.1.6	Coordinates of the human cerebral cortex, or <i>neo-cortex</i>	47
15.2	The block diagrams, schematics and circuits of perception	59
15.2.1	Fundamental differences in the signal paths of the phyla	59
15.2.2	The Information flow in perception and cognition	62
15.2.3	RECENT ARCHITECTURE (Top level topology and schematics) of humans, ca '98	68
15.2.4	The topography, topology and commissure of the diencephalon	103
15.2.5	The key role of the thalamic reticular nucleus	135
15.2.6	The crucial role of the PGN in humans and higher primates EMPTY	141
15.2.7	THE EMERGING GROSS ARCHITECTURE of human vision, ca. 2002	142
15.2.8	Important topological features of the couples related to vision	152
15.2.9	The operational roles of the TRN and PGN/pulvinar couple in vision	158
15.3	The servomechanisms of the visual system of <i>Chordata</i>	175
15.3.9	Features of specific morphological and functional elements	203
15.4	Mechanisms in visual perception	206
15.4.1	The routine versus learning states of operation	206
15.4.1	Spatial and Temporal relationships relating to perception	206
15.4.2	Perception of Shape/Form & motion	208
15.4.3	Perception of luminance	210
15.4.4	Perception of Color	225
15.4.5	Similarity to closely related technologies	234
15.4.6	Abnormalities in human perception	238
15.4.3	Higher Levels of Perception	245
15.4.3.1	Modes of vision using nomenclature of psychology	246
15.4.3.2	Operating modes extended to reading	247
PART II		1
15.5	Recent changes in the visual system baseline, ca 2002	1
15.5.1	Preview of the revised top-level block diagram of the visual cortex	3
15.5.2	Computations within the brain	5
15.5.3	Specific maps within the visual system	9
15.6	The role of the paleo-cortex in vision	15
15.6.1	The topography, topology and commissure of the diencephalon	15
15.6.2	The key role of the thalamic reticular nucleus	39
15.6.3	The crucial role of the PGN/pulvinar <i>couple</i> in humans and higher primates	53
15.6.4	THE EMERGING GROSS ARCHITECTURE of human vision, ca. 2002	65
15.6.5	Important topological features of other <i>couples</i> related to vision	85
15.6.6	The operational roles of the TRN, and the PGN/pulvinar & SC/cerebellum <i>couples</i> in vision	103
15.7	Extrapolations to the full brain	116
15.7.1	The concept of consciousness	117
15.7.2	Top level organization	117
15.7.3	Operating modes	118
15.7.4	Types of neurons	119
15.7.5	Interconnections and signal velocities	120
15.7.6	Maximum operating frequency—need for cache memory	120

PART E OVERALL PERFORMANCE of the VISUAL SYSTEM

16	The Equations of Vision and their confirmation	1
16.1	Introduction	1
16.1.1	Background	2
16.1.2	Preview	5
16.2	New Descriptors of vision [change title]	10
16.2.1	The fundamental concepts of vision	10
16.3	The fundamental equations of vision	11
16.3.1	The conceptual equation of vision	11
16.3.2	The fundamental Vision Equation of long wave trichromats (including humans)	16
16.3.3	The Brightness Equation of vision	17
16.3.4	The Chrominance Equations of human vision	20

16.3.5	The appearance equations of vision	20
16.3.6	The temporal equations of vision	21
16.3.7	Important postulates of this theory	56
16.4	Collected Waveforms of vision	58
16.4.1	Collected <u>imp</u> ulse waveforms of vision	59
16.4.2	Collected pulse waveforms of vision	61
16.5	Cumulative time delays in vision	62
16.5.1	Time delays in the alarm channels	62
16.5.2	Time delays in the cognitive channels	63
16.5.3	Example of cumulative time delay	63
16.6	Evaluation and Interpretation via Psychophysiological Experiments	67
16.6.1	Intermediate complexity situations	68
16.6.2	Complex situations	69
16.7	Evaluation and Interpretation via electrophysiological Experiments	70
16.7.1	Evaluation and Interpretation of Ganglion Cell Output	70
16.7.2	Evaluation and Interpretation of composite waveforms	77
16.7.3	Derivatives of the ERG	94
16.8	Nominal values of constants in human vision	98
17	Performance descriptors of Vision	1
17.1	Introduction	1
17.1.1	Overview	1
17.1.2	Historical descriptors of vision	19
17.1.3	The key role of adaptation in the visual process	29
17.2	The Luminance Characteristic of the human eye	30
17.2.1	Determination of the luminosity function	30
17.2.2	The luminance sensitivity of the human eye	41
17.2.3	Luminance threshold descriptors	68
17.3	The Chrominance Characteristic of the human eye	76
17.3.1	Historical background & the definition of color	77
17.3.2	The chromatic discrimination function	89
17.3.3	Definition of a “New” Chromaticity Diagram	99
17.3.4	New definition based on this Diagram	142
17.4	Combined Luminance/Chrominance Diagrams	147
17.4.1	Background [NEW]	147
17.4.2	A new combined Luminance/Chrominance Diagram	155
17.4.3	Interpreting the new combined Luminance/Chrominance Diagram	161
17.4.4	The CIE Uniform Color Scales system and alternatives	168
17.4.5	Color constancy	172
17.5	The Temporal Characteristic of the human eye	182
17.5.1	Background	182
17.5.2	Transient characteristics of the photodetection system	192
17.5.3	Frequency characteristics of the photodetection system	198
17.5.4	Frequency characteristics of the signal processing system	198
17.5.5	Frequency characteristics of the signal projection system	198
17.6	The temporal performance of the human eye	198
17.6.1	Transient performance–psychophysical context	199
17.6.2	Transient performance–electro-physiological context	223
17.6.3	Temporal frequency domain performance	245
17.6.4	Delay performance	267
17.6.5	Flicker performance	269
17.6.6	Temporal performance of combined visual-motor system	276
17.7	The spatial performance of the human eye	277
17.7.1	Background literature	278
17.7.2	Technical Background	279
17.7.3	Physiology and electrophysiology of the human eye	283
17.7.4	Spatial performance of the higher processing centers of the human visual system	284
17.8	Summary	288
17.8.1	Operation of the luminance channel	289
17.8.2	Operation of the chrominance channels	289
17.8.3	The perception of color under chromatic adaptation	289
17.8.4	Efforts to create a “color solid”	290
17.8.5	The temporal performance of the human eye	290
18	Clinical Electrophysiology & Visual Abnormalities in Man	1
18.1	Background	1

18.1.1	Functional block diagram of vision	3
18.1.2	Terminology and Glossary	5
18.1.3	Overview	19
18.1.4	Defining spatial and spatial frequency abnormalities of vision	25
18.1.5	Defining color vision abnormalities	27
18.1.6	Transient abnormalities of vision	58
18.1.7	Cross reference with clinical procedures	59
18.1.8	Definition of new anomaloscopes and colorimeters for Research	61
18.2	Failures in non-afferent paths, stage B, 0 & 5	62
18.2.1	Abnormalities of the optical image forming apparatus, stage B	62
18.2.2	Failures in the supply functions, stage 0	63
18.2.3	Failures in the oculomotor subsystem, stage 5	65
18.2.4	Failures in eye formation and the automatic focus servomechanism, stage 5	67
18.3	Failures of photodetection in stage 1	83
18.3.1	Total failures in photodetection	83
18.3.2	Partial failures	85
18.4	Failures in signal matrixing in stage 2	86
18.4.1	Criticality of bias levels in stage 2	87
18.5	Failures of signal projection in stage 3	87
18.5.1	Failures of brightness related functions	88
18.5.2	Failures of chrominance related functions	88
18.6	Failures of the Pretectum, LGN and Cortex, stage 4	89
18.6.1	Failures of the Pretectum and pulvinar pathway	89
18.6.2	Failures of the LGN and optic radiation through V1, V2 etc.	90
18.6.3	Failures originating in the frontal lobe of the cortex	90
18.6.4	Failures of efferent elements beyond Area 7	90
18.7	After-images and illusions as operational curiosities	90
18.8	Additional abnormalities from the medical perspective	90
18.8.1	Misalignment of the photoreceptor of the retina.	90
18.8.2	Examples of achromatopsia	92
18.8.3	Ametropia and other errors of the servomechanisms of the POS	101
18.8.4	Other diseases of the visual system	104
18.8.5	Conditions following trauma to the visual system	105
18.8.6	Surgical repair of significant retinal damage/disease	107
19	Reading, listening and Other Complex Operations related to object recognition	1
19.1	Overview of the general process of perception and cognition	2
19.1.1	General perception of a scene—role of the awareness channel	2
19.1.2	Detailed perception of a scene—role of the POS	2
19.1.3	A The routine versus learning states of operation (old 15.4.1)	2
19.2	Perception and cognition of a general scene	4
19.2.x	Frequency of ocular motions during perception	4
19.2.3	Planimetry of eye motion supporting interpretation of detail	4
19.3	Perception and cognition in reading	5
19.3.1	The development of writing	6
19.3.2	Higher Levels of Perception—Introduction to reading	6
19.4	Smooth and Salutatory Pursuit EMPTY	8
19.5	Interp & Percept formation within the diencephalon EXPAND	8
19.6	Reserved	8
19.7	Reserved	8
19.8	Reading and the interpretation of fine detail	8
19.8.1	Background	9
19.8.2	Overview scenario of the reading process REWRITE	10
7.5.4	Extension of the model of the visual servosystem	23
7.5.5	Extension of the concepts leading to cognition	24
19.8.3	The mechanics and mechanisms of reading	25
19.8.4	Performance in reading and analysis of fine detail EMPTY	29
19.8.5	Progress in machine vision related to reading	30
19.9	Listening to speech	30
19.9.1	Historical description of Broca's and Wernicke's areas EMPTY	30
19.9.2	More recent descriptions of brain areas EXPAND	31
19.10	Image information extraction leading to object and face recognition	31
19.10.1	Historical background focused on face recognition	32
19.10.2	Capability of eye-trackers in face recognition experiments	43
19.10.3	The PEEP procedure used in object recognition	47

19.10.4 Establishing a multi-discipline object recognition framework 56
19.10.5 The role of learning machines in vision 81
19.10.6 Plausible model of biological object recognition 105
19.10.7 The minimum dimensionality required to index recognized objects 111
19.10.8 Protocol for evaluating gaze content within PEEP procedure PRELIMINARY
..... 113
